

Como deletar os recursos dos múltiplos provedores de Cloud

Primeiro passo - Excluir todos os objetos do bucket

- Acesse a Console da AWS and abra o serviço do S3.
- Selecione o seu bucket e clique em Empty.
- Para confirmar a exclusão dos objetos, digite *permanently delete*.
- Clique em Empty.

Primeiro passo concluído! 🎉

Segundo passo - Atualize o instance deletion_protection de true para false

- Abra o arquivo `tcb_gcp_database.tf` disponível no diretório `~/mission1_pt/mission1/pt/terraform/` usando o Google Editor.
- Na linha 11 do arquivo `tcb_gcp_database.tf`:
 - Atualize de `deletion_protection = "true"` para `deletion_protection = "false"`

Example:

- Versão atual: `deletion_protection = "true"`
 - Versão atualizada: `deletion_protection = "false"`
- Mude do Editor para Terminal
 - Execute os comandos para aplicar as mudanças feitas no arquivo do Terraform:

```
cd ~/mission1_pt/mission1/pt/terraform/  
terraform apply Digite o valor: yes
```

Agora, você está pronto para excluir todos os recursos com o terraform destroy. 🚀

- Execute o comando abaixo:

terraform destroy *Digite o valor: yes*

```
google_sql_database.database: Destroying... [id=projects/lucky-wall-294821/instances/luxxy-covid-testing-system-database-instance-en/databases/dbcoovidtesting]
